VISI-PDM 2016 R1 Update

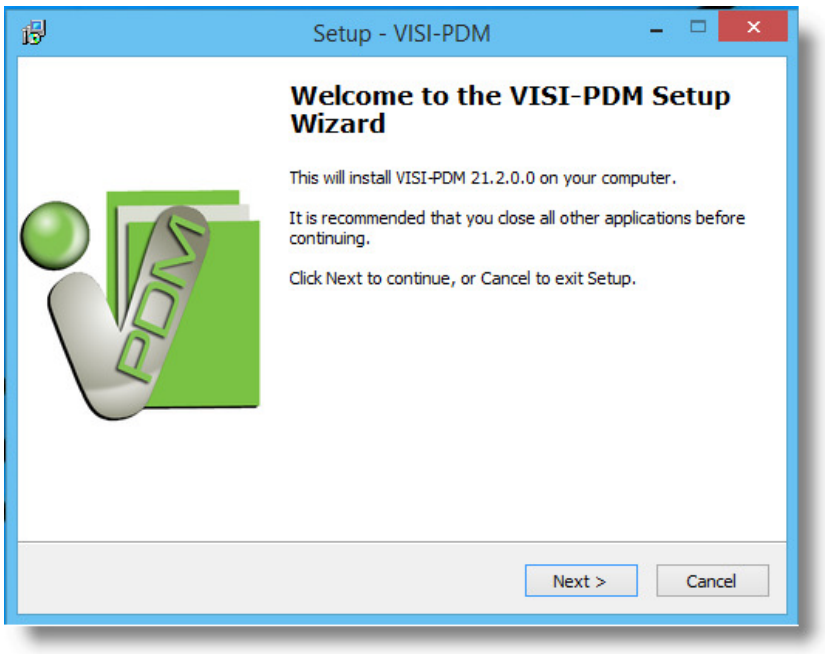

IMPORTANT NOTE!

Please pay attention to the notes about the new license files for version 2106 R1 at the end of this setup guide!

1. Update of VISI-PDM on a Server or Single Seat

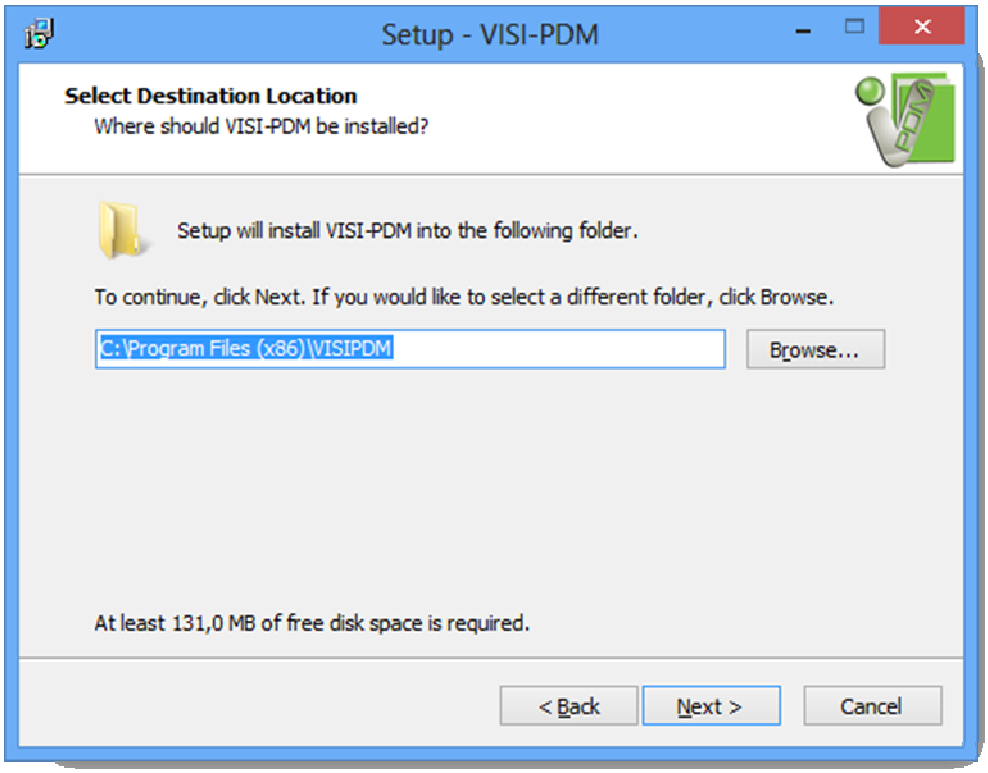

1. Login to the system as an 'Administrator'.
2. Create a backup of your VISI-PDM program directory.
3. Close all open applications.
4. Temporarily disable any anti-virus software.
5. Open the file 'Setup.exe' from the CD.
6. Select your installation language, then press 'OK' to continue.

The installation process will now start:

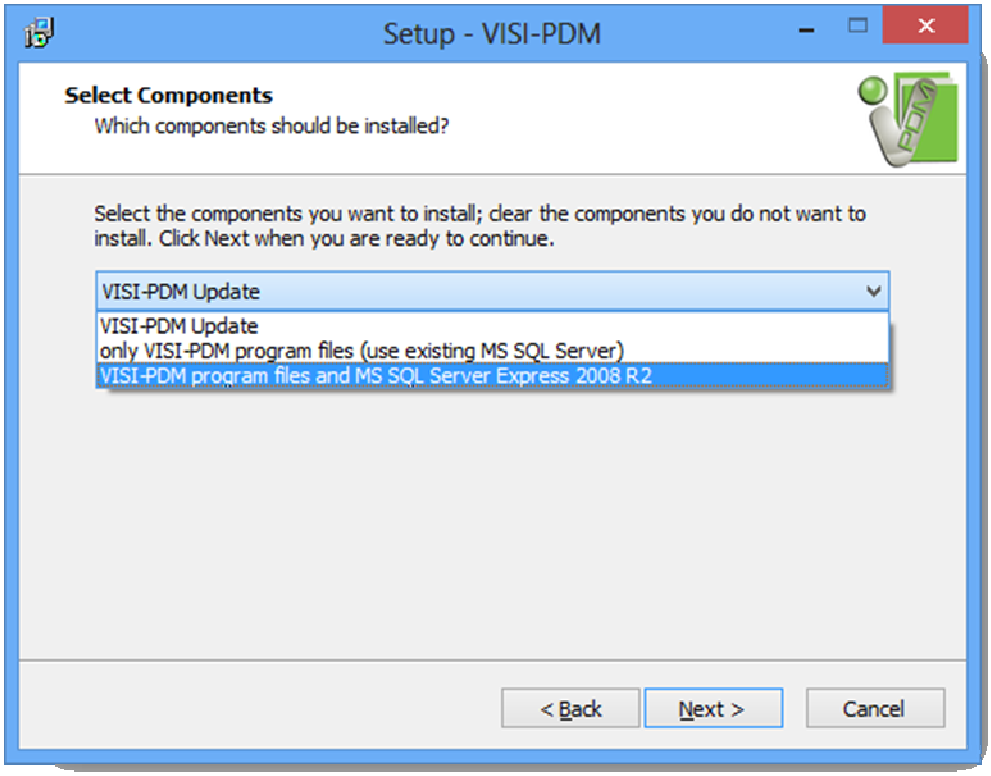

Press 'Next' to continue.

Select the program folder of your VISI-PDM installation:

Press 'Next' to continue.

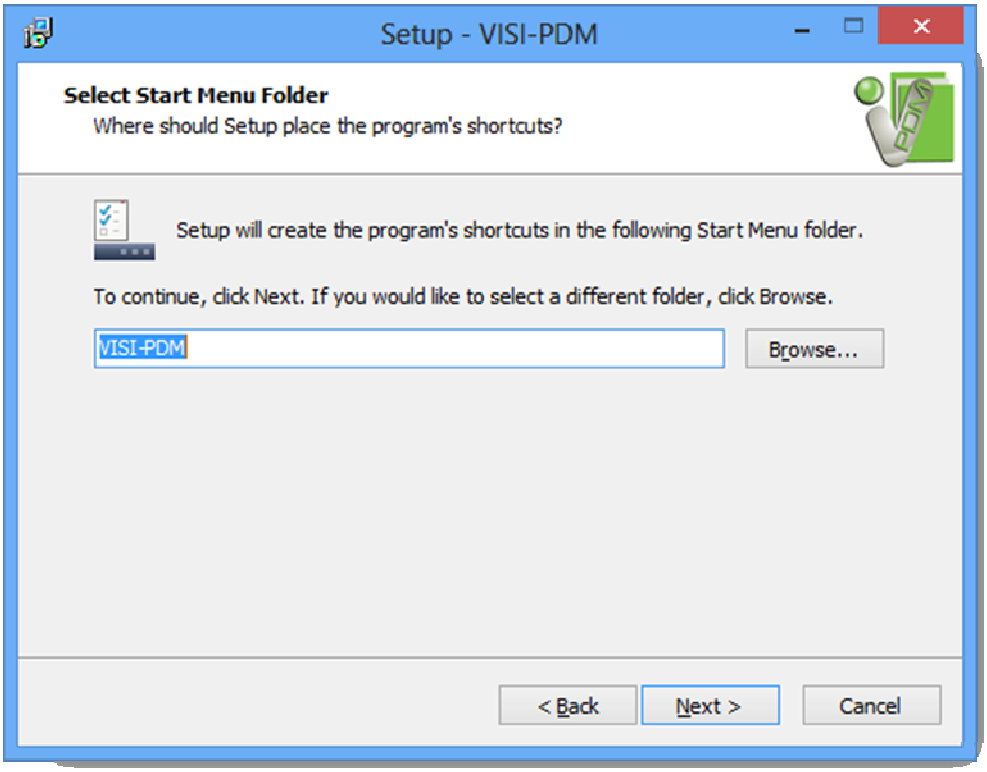

7. Select the components to be installed:

Important Note:
Select „ VISI-PDM Update“ to update your installation.

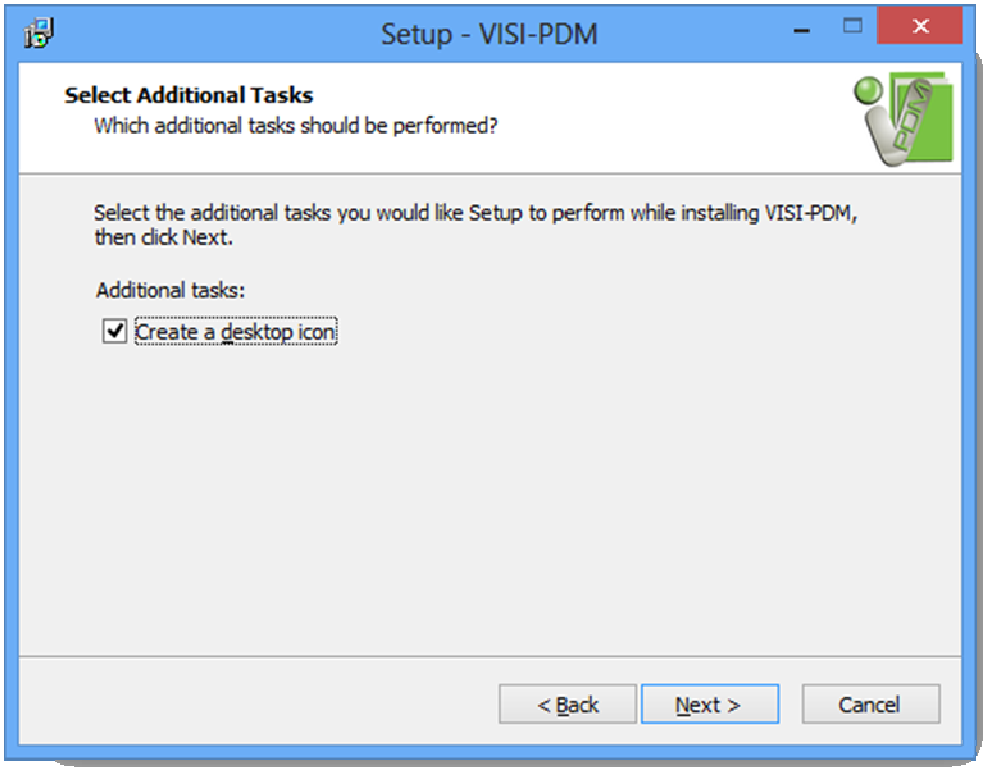

Press 'Next' to continue.

8. Select the Windows 'Start Menu' folder:

Press 'Next' to continue.

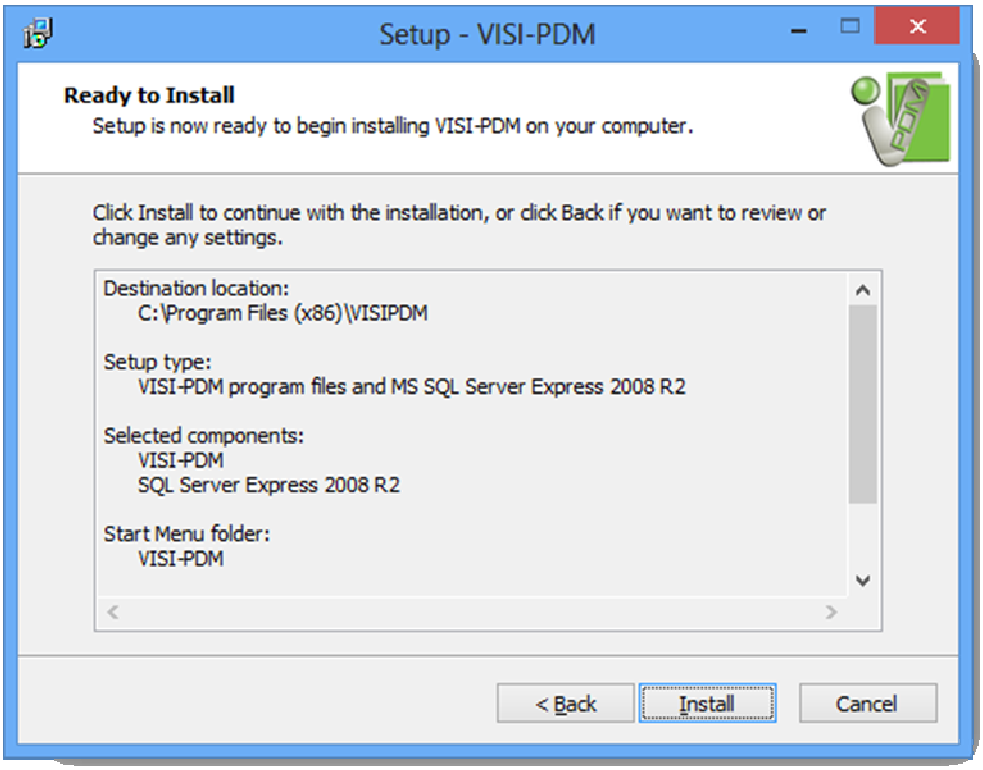

9. Create a desktop icon:

Press 'Next' to continue.

10. Pre-update summary:

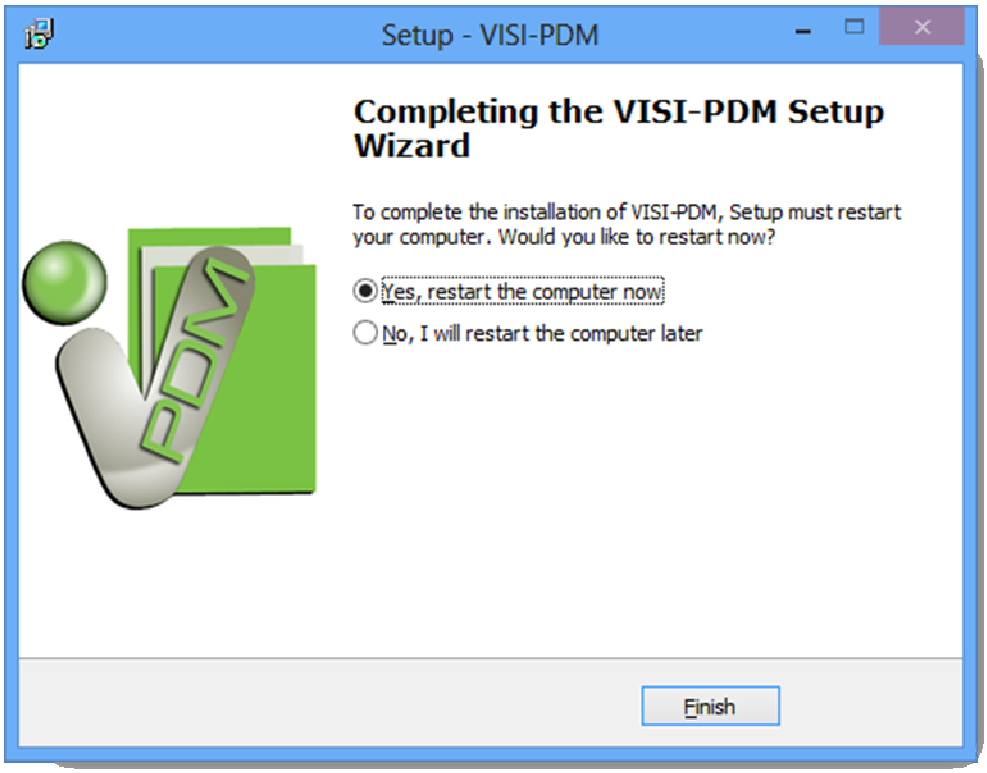

The installation routine will now display a pre-update summary.

If these settings are correct, press 'Install' to continue.

Files will now be copied/installed onto the computer.

Installation complete:

Press 'Finish' to complete the installation routine.

When you launch VISI-Series the next time your database will be automatically updated by the system if needed.

2. Update of VISI-PDM on a Network Client

After Updating the VISI-PDM Server installation you need to update your clients if you use local installations of VISI-PDM on your clients. If all client PCs are installated with “Server Installation” and use VPDM.EXE directly from the server, no ClientSetup is needed.

To do a client update, launch program **“ClientSetup.exe”** from your server installation folder on every client. Follow the installation instructions to do this.

Enable the Integration for VISI-Series
To enable the VISI-Series integration, add the following lines into the 'EXT.CFG' file within the 'System' directory of your VISI installation:

…….

[EXTENSION10]
EXTENSION = Simula.dll
DATA_ID = 73D967FD4FAC4DC9857E863C7A744749 ; ID of the data record handled by the extension
LOAD_MODE = 2 ; Module Load Mode 1 = Preload, 2 = Load On Call

[EXTENSION11]
EXTENSION = visipdm.dll

Please add the next free digits after the word “EXTENSION” for a new unique counter of DLLs to load.

3. Ask for new license file for VISI-PDM 2016 R1

Version 2016 R1 of VISI-PDM changed the method to generate a license code to be able to support multiple license files on one server from now on.

Due to the fact that your VISI-PDM license code will change after your update installation, your license file will expire after a **grace period until 01/31/ 2016**.

When launching VISI-PDM 2016 R1 intention is invited to an old license file. Please contact your local VISI dealer to request a new license file.
In this notification the new license code will be shown, you need for your license file request.

Please launch VISI-PDM as usual from a client PC to display the correct new license!
As the complete license file path from the client PC is relevant for the license code, a launch from the „local server folder“ results another license code that does not work for the client PCs.
